- (12) “Strength in numbers? Analysis of stock price and trading volume reactions to Climate Action 100+ member expansion” with *Junjun Liu, The University of Alabama in Huntsville*.

COURSES TAUGHT & PLANNED

- Professional Accounting Research (Arizona State University, MACC program) Spring 2014-present
This MACC course applies US GAAP (FASB Codification) and IFRS guidance to complex financial reporting issues. Among other topics, the course reviews the history of accounting and financial reporting standard-setting in the US and globally, conceptual framework, standard-setting work of the SEC, the FASB, and the IASB, and recently issued reporting standards. It further develops written and verbal communication skills in corporate accounting and auditing settings. The course includes lessons on the use of SEC Edgar (including full-text search), Thomson Reuters Checkpoint Edge, IFRS.org (IFRS guidance), Bureau van Dijk’s Osiris (global companies’ data and filings), and Calcbench (SEC filings search using XBRL). The course has been taught in person and using a synchronous Zoom modality. Currently, most class lectures are prerecorded, and the class time is used for conducting professional accounting research and discussing relevant case studies. (2022: two sections with course evaluations 6.8/7)
- Professional Responsibilities II (Arizona State University, MACC & MTAX) Fall 2021-present
This MACC and MTAX course focuses on the responsibilities of professional accountants and auditors and professional development. Each class covers a different topic. The first part of the course covers professional development topics related to diversity (gender and racial), equity, and

inclusion in auditing and tax, focusing on the current US and global state of the profession. The second part of the course covers ethical dilemmas and potential accounting and auditing issues arising as a result of the changes in audit technology spurred by the fourth industrial revolution. Some examples are ethical dilemmas surrounding expenses related to working remotely, the use of novel technology (e.g., drones) in audits, integrity issues in online CPE course participation, etc. The third class introduces governmental and nonprofit company accounting. (2022: three sections [combined] with course evaluations 6.7/7)

Financial Performance Reporting and Analysis (Online MBA program) Spring 2019, Fall 2020

This introductory graduate-level financial reporting course familiarizes students with financial accounting and financial statement analysis. The course focuses on the meaning of the information provided in the financial statements and on applying this information to internal and external decision-making. The course has been taught online with one synchronous class session. When teaching the course, I have incorporated asynchronous case discussions. I also updated the course to include integrated and sustainability reporting topics to teach students about the current reporting issues and International Accounting to illustrate that students can interpret IFRS financial statements with little additional effort.

Introduction to Financial Reporting (Emory University, BBA program) Summer 2012

This introductory undergraduate-level course in financial accounting is the first accounting class introducing students to financial accounting and reporting concepts and their application.

ACADEMIC EMPLOYMENT & TRAINING
