## RESEARCH AND SCHOLARSHIP

---

Trained as a clinical psychologist, my work focuses on pragmatic, collaborative, interdisciplinary research that promotes health equity and improves population health outcomes. I utilize an environmental systems perspective to study how modifiable contextual factors (organizational culture, stigma, policies, workflows, infrastructure) impact health and can improve adaptation and implementation of multilevel interventions in clinical and community settings.

### Key research descriptors:

• health behavior change • behavioral interventions • multi-level interventions • health equity • mixed methods • implementation science • integrated behavioral health • weight stigma • disordered eating • physical activity • weight-inclusive care • diabetes • chronic pain • quality of life • Acceptance and Commitment Therapy • population health

## SCHOLARY ACTIVITY

---

*Summary:* Google Scholar lists my citation count at 2441 (1/2026), with an h-index of 13 and i10-index of 16.

*Authorship considerations:* Single authored publications in my area of study are unusual. Authors are typically listed in order of decreasing contribution, with the exception of the senior author, corresponding author, or principal investigator who is often listed last. Medical journals list coauthors in alphabetical order by last name.

*Journal metrics:* SCS in the citations below refers to the journal's latest available Scopus CiteScore, a metric similar to journal impact factor, alongside the journal percentile rank and subject area. The majority of my publications are in the top 25% of journals by CiteScore.

*Contributions* for each article are indicated across broad categories of (1) design, (2) data (collection and/or cleaning), (3) analysis, (4) interpretation, and (5) writing/editing.
