## MEDIA COVERAGE

---

TBD                   Emily Abellon, E. P. Mental health and communication [Invited guest interview on audio podcast episode]. In *Cultivate Talk*. Cultivate Talk Podcast.

## SCHOLARLY PRESENTATIONS

---

### Guest Lectures

2025 *Structural Equation Modeling and Statistical Programs (R and Mplus)*. Guest lecture for Dr. Paul Mongeau's doctoral seminar on multivariate statistical analysis of data in communication (COM608), Hugh Downs School of Human Communication, Arizona State University, Tempe, AZ.

2024 *Variability*. Guest lecture for Marco Dehnert's undergraduate course on quantitative research methods in communication (COM408), Hugh Downs School of Human Communication, Arizona State University, Tempe, AZ.

## INSTRUCTIONAL EXPERIENCE

---

### Elements of Interpersonal Communication (COM110)

*Instructor of Record*

This course introduces students to concepts and principles related to interpersonal communication across a multitude of contexts. Throughout this course, students gain an increased understanding of interpersonal communication. Additionally, the course focuses on ways students can become more self-aware and increase communication competence to build healthy interpersonal relationships.

### Public Speaking (COM225)

*Instructor of Record*

The purpose of this course is to enable students to better understand theories and practices of public speaking. Provides students with the ability to enhance speech delivery techniques, speechwriting skills, and persuasion abilities. Additionally, students develop ethical public speaking skills, learn how to enter the public dialogue on issues important to them, and critically evaluate the spoken and written speeches of others.

### Mass Media / Mass Culture Communication (COM249)

*Graduate Teaching Assistant*

Explores the interplay between technology, mass communication media, and culture. Provides students with the ability to articulate a basic understanding of mass media through a historical perspective and explain the system of governing laws and regulations affecting mass media. Additionally, students are able to critically evaluate the structure of mass media as an industry and distinguish the differences among the dimensions of mass media literacy.

### Relational Communication (COM310)

*Graduate Teaching Associate*

This course focuses on describing and explaining communication processes that occur within the context of close relationships. Students are introduced to a wide variety of interpersonal and relational communication theories. Additionally, the topics covered in this course help students understand how people develop, maintain, and end relationships, as well as how people cope with relational challenges.

### Persuasion and Social Influence (COM319)

*Instructor of Record*

The primary focus of this course is to examine major social science perspectives and concepts related to persuasion and social influence. Students become familiar with major theories, areas of research, and points of controversy in the social scientific study of persuasion. Additionally, this course spends a great

deal of time focusing on the theories, methods of analysis, and results (mostly quantitative) of persuasion research.

### **Advanced Research Methods (COM308)**

#### *Instructor of Record*

This course examines social scientific methods for studying human communication. The course provides the student with the opportunity to develop a working knowledge of inquiry methods and preliminary research skills. These skills include the ability to be a critical consumer of scientific research and design a research project. Furthermore, the course extends the introduction to methods course (COM 207) and serves as a foundation for 400-level research methods course in communication.

### **Quantitative Data Analysis in Communication (COM408)**

#### *Instructor of Record*

This course is an introduction to quantitative research methods and basic statistics. The majority of the course focuses on how statistics are calculated, using and understanding SPSS as a statistical software package, understanding the substantive meaning of statistical results, and being able to describe these results in writing. The COM308 course is a pre-requisite for this course. The course teaches students how to understand statistical procedures employed in communication research, know how to select appropriate statistical tests to answer research questions, perform statistical procedures “by hand” and using SPSS, and write-up results in APA 7<sup>th</sup>-edition format.

### **Multivariate Statistical Analysis of Data in Communication (COM608)**

#### *Doctoral Seminar Assistant for Dr. Paul Mongeau*

This course introduces doctoral students to multivariate statistical analysis of data in communication. Specifically, the course covers five procedures commonly used in quantitative communication research (i.e., k-way ANOVA, multivariate analysis of variance, multiple regression, exploratory factor analysis, and structural equation modeling). Students’ are required to have already passed a *univariate* (i.e., introductory) statistics course. Coverage of each technique involves three parts: (a) conceptual understanding of the statistical tests (e.g., purpose, assumptions, options), (b) SPSS analysis (and, in the case of SEM, the use of AMOS, R, or Mplus for analysis), and (c) interpretation and communication of statistical output.
