## RESEARCH, TEACHING AND MENTORSHIP

---

My research focuses on charge transport in ion-conducting electro-ceramics for solid-state batteries, fuel cells, and next-generation energy technologies, using multimodal characterization to uncover how charge, structure, and extreme electric fields interact at material interfaces. I have developed and taught core courses including *Materials and Manufacturing Processes*, *Engineering Electrical Fundamentals*, and *Solid-State Ionics and Electrochemistry*. I currently mentor three PhD students and five undergraduate researchers, six of whom have earned competitive research fellowships and received recognition from Arizona State University and national scientific societies.
