INDEPENDENT RESEARCH & METHODOLOGY

Methodology: Human-AI collaborative inquiry with falsification standards, dated version control, preserved contradictory results, and auditable checksums across 180+ archived manuscripts.

- **Longevity, Political Legitimacy & Unequal Access:** Built a governance framework for unequal access to life-extending therapies; analyzed why later redistribution cannot restore healthy years already lost.
- **AI Governance, Personhood & Epistemology:** Examined legal and moral standing of AI, machine statelessness, and standards for AI-assisted scholarship.
- **AI-Governance Legitimacy Testing:** Tested Eva Erman and Markus Furendal's legitimacy framework against longevity politics; the paper led to direct correspondence with the authors.
- **Quantitative Access & Tech Diffusion:** Applied queueing models to compare technological progress with effective access in biotech, housing, and cybersecurity; built reproducible pipelines with documented diagnostics.
- **Comparative Institutional History:** Studied state resilience, succession crises, and institutional legitimacy during regime collapse across East Asian (Sinographic) and European cases.
- **AI-Assisted Research Workflows for Humanities & Social Science (2026–Present):** Built AI-assisted quantitative workflows with structured logs, assumption records, calibration, and model checks.
